

SIDDHI HIRPARA

DevOps Engineer

Ahmedabad, Gujarat | +91 8320190035 | siddhihirpara24@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

DevOps Engineer with practical experience automating deployments and managing cloud infrastructure using AWS (EC2, S3, IAM, VPC), Docker, Jenkins, and Terraform. Built CI/CD pipelines to streamline software delivery and applied Infrastructure as Code principles for consistent, repeatable provisioning. Additional background in Java, Spring Boot, REST APIs, and MySQL. Fast learner who thrives on solving infrastructure and automation challenges.

SKILLS

Cloud: AWS (EC2, S3, IAM, VPC, Security Group, RDS, Load Balancer, Auto Scaling)

DevOps: Docker, Jenkins, Git, GitHub, Terraform, CI/CD

Operating Systems: Linux (Ubuntu), Windows

Programming: Java, Python, Shell Scripting, SQL

Backend: Spring Boot, REST APIs

Database: MySQL

Tools: Maven, Postman, VS Code, IntelliJ IDEA

EDUCATION

Master of Computer Application (MCA) Sardar Vallabhbhai Global University SEM 1 – CGPA: 9.02 SEM 2 – CGPA: 9.14	2025-2027 Ahmedabad
Bachelor of Computer Application (BCA) SMT. K. S. N. Kansagra Mahila College CGPA: 7.79	2022-2025 Rajkot

CERTIFICATIONS

- The Linux Foundation – Developing Secure Software [Certificate](#)
- AWS Cloud Practitioner Essential – AWS [Certificate](#)
- Cybersecurity Analyst Job Simulation – TATA [Certificate](#)
- Launch an auto-scaling AWS EC2 virtual machine – Coursera [Certificate](#)

PROJECTS

Multi-Platform CI/CD Pipeline | Spring Boot, MySQL, Jenkins, Docker, AWS EC2, GitHub [\(LINK\)](#)

- Built a Spring Boot and MySQL REST API application, delivering 15+ CRUD endpoints.
- Containerized the application using Docker for faster, consistent environment setup.
- Automated build, test, and deployment via a Jenkins CI/CD pipeline, cutting deployment time significantly.
- Deployed the application on AWS EC2, ensuring reliable and scalable hosting.
- Managed source code and version control using Git and GitHub throughout development.

Infrastructure Automation using Terraform | Terraform, AWS (EC2, VPC, S3) [\(LINK\)](#)

- Provisioned AWS infrastructure — including EC2, VPC, subnets, Internet Gateway, and security groups — using Terraform and Infrastructure as Code (IaC) principles.
- Automated cloud resource provisioning, eliminating manual configuration steps and reducing setup time.
- Built reusable Terraform modules and variables to support consistent deployments across multiple environments.
- Managed infrastructure state using Terraform, ensuring reliable and repeatable provisioning.
